Acknowledgements

After having spent four years pursuing my PhD, the final task that remains is to write this section, the acknowledgements. In some ways writing this is both more joyful and more difficult than writing the rest of my thesis. It is joyful because I get the chance to thank the people that have helped me during these four years, but it is also difficult because I find myself in some cases lacking the right words. I will do my best, but I have come to terms with the fact that I will never be much of a wordsmith. Numerous people have supported and encouraged me during these past four years, and although I will not write a long list of names I would like to mention a few of them.

Bert, I would like to thank you for your guiding and supervision. I feel that I have learned a great deal during our work meetings and discussion, and I am forever impressed by your outstanding memory.

Dirk, we have had many discussions, whether it was I who needed to vent some irritation over university bureaucracy, trying to gain understanding or (in a few rare cases) explaining things to you, I put great value in our talks. Thank you, you have in my opinion very neatly steered me through my PhD.

Maarten, from the first week you have been a great colleague and a good friend, whether sharing lunches in the office or drinking whisky in the evening. It's been a good time, and I'm not likely to forget about the darkroom anytime soon.

Mark, I have had great times with you, be it chatting in the pub or on the ski-slopes! Thanks for transferring knowledge on OppA to me, and also for being my paranymph.

Renee, I've appreciated our discussions and talks over the past years, be it about NMR, protein expression, food (although I still do not get the greatness of boerenkool) or whisky... Finally, thank you for being my paranymph.

Andreas, Oscar, David and Björn, we have for a long time been very good friends, and I love meeting you guys every time I'm in Sweden or when you've come to visit. Thank you for being there for me!

The Poolman group, I have had a very nice time here in Groningen, and all of you have been an essential part of what made the time here so pleasurable, thank you!

Mamma och Pappa, ni har alltid varit där för mig. Tack för att ni har varit, och naturligtvis fortfarande är, så underbara föräldrar!

Josy, I met you very early after I came to the Netherlands, and I fell in love with you during our first summer together, a feeling that has only grown deeper and more sincere since. I have had an amazing time so far with you, and I believe we together will have extraordinary years to come. Thank you for all your love and support!

Groningen, March 2010
Ronnie Berntsson

Contents

1	General introduction to substrate-binding proteins	1
1.1	Introduction	1
1.1.1	SBP dependent transport proteins	3
1.1.2	SBP dependent channel, signal and regulator proteins	4
1.1.3	Structures of SBPs	5
1.2	Structural classification	7
1.2.1	Cluster A	8
1.2.2	Cluster B	11
1.2.3	Cluster C	12
1.2.4	Cluster D	12
1.2.5	Cluster E	14
1.2.6	Cluster F	14
1.3	Discussion	16
2	The structural basis for peptide selection by the transport receptor OppA	25
2.1	Abstract	25
2.2	Introduction	26
2.3	Results	27
2.3.1	Crystallization and Structure Determination	27
2.3.2	Oligomeric state of OppA*	28
2.3.3	OppA* complexed with endogenous peptides	30
2.3.4	OppA* in the open conformation	37
2.3.5	Register shifts in molecular dynamics simulations	39

2.4	Discussion	40
2.5	Experimental Procedures	44
2.5.1	Light scattering	44
2.5.2	Analytical ultracentrifugation	45
2.5.3	Identification of co-purified endogenous peptides	45
2.5.4	Crystallization and structure determination	46
2.5.5	Molecular dynamics simulations	47
2.5.6	Data analysis	48
3	Contribution of a hydrophobic pocket to peptide binding in lactococcal OppA	49
3.1	Abstract	49
3.2	Introduction	50
3.3	Results	51
3.3.1	Structure of OppA* with bound SLSQSLSQS	51
3.3.2	Engineering of the hydrophobic pocket in OppA*	52
3.3.3	Peptide binding studies	54
3.3.4	Identification of endogenous ligands in OppA* mutants	57
3.4	Discussion	57
3.5	Experimental Procedures	60
3.5.1	Bacterial strains, plasmids, growth conditions and purification	60
3.5.2	Crystallization and structure determination	61
3.5.3	Fluorescence measurements	61
3.5.4	Isothermal titration calorimetry	62
3.5.5	Differential scanning calorimetry	63
4	Ligand binding and crystal structures of the SBD of the ABC transporter OpuA	65
4.1	Abstract	65
4.2	Introduction	66
4.3	Results	68
4.3.1	Glycine betaine binding	68
4.3.2	Thermodynamic analysis of ligand binding	71

4.3.3	Substrate specificity of OpuAC	71
4.3.4	3D Structure of OpuAC	72
4.3.5	Ligand binding site	75
4.4	Discussion	76
4.5	Experimental Procedures	78
4.5.1	Bacterial strains and growth conditions	78
4.5.2	Preparation membrane vesicles and protein purification	79
4.5.3	Fluorescence measurements	80
4.5.4	Data analysis	80
4.5.5	Isothermal titration calorimetry	81
4.5.6	Glycine betaine binding by filter-based assay (protein precipitation)	81
4.5.7	Substrate transport	82
4.5.8	Static light scattering	82
4.5.9	Crystallization and structure determination	82
4.5.10	Accession codes	83
5	Selenomethionine incorporation in proteins expressed in <i>L. lactis</i>	85
5.1	Abstract	85
5.2	Introduction	86
5.3	Results	86
5.3.1	Selenomethionine incorporation	86
5.3.2	Crystallization and Structure Determination	87
5.4	Discussion	90
5.5	Experimental procedures	91
5.5.1	Selenomethionine incorporation	91
5.5.2	Purification of OppA*	91
5.5.3	Purification of OpuA	93
5.5.4	Mass spectrometry analysis of SeMet substituted proteins	93
5.5.5	Crystallization and structure determination	94
6	Summary and concluding remarks	97

7 Nederlandse samenvatting voor geïnteresseerden buiten dit vakgebied (Summary in Dutch)	105
8 Sammanfattning på svenska för intresserade utanför det här fackområdet (Summary in Swedish)	107

List of Figures

1.1	Schematic overview of SBP dependant membrane proteins	2
1.2	Sliced through surface representation of OppA from <i>L. lactis</i>	6
1.3	The different thermodynamic states of SBPs.	7
1.4	Phylogenetic tree of SBPs	9
1.5	Different classes of SBPs	11
2.1	Oligomeric state of OppA*	30
2.2	The OppA* structure	31
2.3	Peptide binding sites	32
2.4	Bound ligands and their interactions	33
2.5	Sequence alignment of OppA	35
2.6	Stereo view of OppA*	36
2.7	Peptide density in the open-liganded OppA* structures	38
2.8	Molecular dynamics simulation using the open conformation and the octapeptide RDMPIQAF	39
2.9	Snapshots of peptide-protein interactions during MD simulation . . .	40
2.10	Ramachandran plot of the bound ligand bradykinin	43
3.1	Peptide binding to OppA* in different registers	53
3.2	ITC measurements of bradykinin binding to OppA* WT and mutants	55
3.3	Amino acid composition of the endogenous ligands	58
4.1	Schematic of OpuA from <i>L. lactis</i>	67
4.2	Glycine betaine-binding to purified OpuA and OpuAC	70
4.3	Substrate binding to OpuAC probed with intrinsic protein fluorescence	73

4.4	Transport activity of reconstituted OpuA	74
4.5	Static light-scattering analysis of OpuAC	74
4.6	Overall structure of OpuAC and its binding site	76
5.1	Selenomethionine incorporation in OppA* and OpuA	88
5.2	Experimental electron density and model of OppA*	89
5.3	Ribbon representation of OppA* in the open unliganded conformation	90
6.1	Schematic overview of ABC-importer cycle	102

List of Tables

1.1	Overview of the determined clusters of SBPs	10
1.2	Overview of SBPs available in the PDB	18
2.1	Data collection and refinement statistics for OppA*	29
3.1	Peptide binding data to wild-type and mutant OppA*	56
3.2	Comparison of K_D and T_m between wild-type and mutant OppA* . .	57
3.3	Data collection and refinement statistics for OppA* complexed with SLSQSLSQS	62
4.1	K_D and ΔF_{max} values of glycine betaine binding to OpuA and OpuAC	69
4.2	K_D and K_I of various ligands bound to OpuAC	72
4.3	Data collection and refinement statistics for OpuAC	75
5.1	Composition of chemically defined medium	92
5.2	Data collection and refinement statistics for OppA-SeMet	95
